Logo Specifications and Usage

Primary Logo

The Abet logo consists of two elements: the icon mark and the wordmark. The icon is a geometric arrangement of directional arrow fragments that converge into a single cohesive unit — representing cross-functional specialists assembling into one sovereign execution pod. The wordmark "abet" is set in lowercase as an expression of utilitarian infrastructure.

Space, Size and Scaling

The base unit — written as U — is the width of a single chevron in the logo mark. All three chevrons are identical. Every spacing value in the Abet brand system is a multiple of this one measurement.

Clear Space

The exclusion zone is equal on all four sides: 1.0U. No text, logos, graphic elements, or background breaks may enter this protected area.

Internal Logo Spacing

The gap between the chevron group and the wordmark is 0.7U. The vertical step between each stacked chevron is also 0.7U. Secondary internal gaps within the lockup sit at 0.3U.

Spacing Hierarchy

The logo's own construction produces four spacing tokens that extend across every brand application — layouts, UI, print, environmental. Always pull from this scale. 1.0, 0.7, 0.3, and 0.1 where 0.3 is too big and 0 is too little.

Scaling

The system works at any scale. Set your base unit once per application and the full hierarchy follows automatically. When 1U equals 40px: 0.7U is 28px, 0.3U is 12px, 0.1U is 4px.

Icon only

Notes

Avoid any color pairings not defined here. Always use the icon and wordmark together. The icon only is recommended where the full lockup feels too busy or space is too constrained.

Aeonik

Hierarchy

Typography spacing is governed by the same U-based token system as the logo.

Display / Hero

H1 - Section title

H2 - Subsection title

H3 - Supporting labels

Body - Paragraph

Spacing Between Typography Elements

The four tokens apply directly to typographic layout:

1.0U — separation between major sections or content blocks.

0.7U — distance between a heading and its following body copy

0.3U — list items, or between a label and its value.

0.1U — optical micro-adjustments, tight pairings like an icon sitting next to inline text.

Iconography and Images

Icon style

Shape and style

All icons used across Abet materials must be geometric, and minimal. Stroke weight should be consistent across all icons at standard size. Rounded line caps and joins throughout and not sharp terminations.

Color

Icon color is dark on light backgrounds and White on dark backgrounds. Alternatively blue on white backgrounds and white on blue backgrounds.

Icon library

Preferred icon library: Lucide or Huge icons (regular weight). Both align with the geometric, precise aesthetic the brand requires.

Don't

Icons should never be decorative. Every icon used must serve a functional purpose — labeling a feature, indicating a direction, or clarifying a concept. If an icon doesn't add clarity, remove it.

Photography Tone

General Rules

Abet does not use generic stock photography of people shaking hands, smiling at laptops, or standing in glass offices. That world is exactly what the brand is positioned against

When people appear in photography they should be mid-work, not posed. A builder reviewing a PR. An architect mapping a system on a whiteboard. Real moments, not performed ones.

If photography is unavailable, abstract technical visuals — node graphs, pipeline diagrams, clean infrastructure schematics — are always a stronger choice than generic people photography for this brand.
